PROJECTS

World Cup Database ☑
Designed a relational database for FIFA World Cup data using SQL and Microsoft Access, featuring 11 core entities (Players, Matches, Awards).

- Complex queries (top scorers, team penalties, shared awards).
- Data validation against FIFA rules (e.g., player-team registration).
- User-friendly forms for tournament/player management.

E-Government Implementation in Egypt ☑
Challenges, Impact, and Strategic Framework
research project analyzes Egypt's e-government ecosystem, focusing on its alignment with Egypt Vision 2030. It evaluates the current state of digital governance across healthcare, education, and public administration, identifies critical barriers, and measures the impact of emerging technologies (AI, IoT, blockchain) on service delivery.
